## EXPERIENCE

---

### Front-End Developer Intern - [Fundação Joanna de Ângelis](#)

Feb 2025 – Jan 2026

- Led the development of a web platform as the primary developer, collaborating with a multidisciplinary team. Implemented most of the solution using Next.js, React, Redux, and styling, delivering UX and performance improvements that increased NGO donation revenue by 15%.
- Implemented a real-time alert banner for critical demands, increasing volunteer engagement and **reducing response time** during periods of high demand.
- Structured CI/CD pipelines with GitHub Actions, including automated test execution (Jest, Cypress, and Playwright), automatic pull request preview, and QR Code generation for mobile, **reducing QA effort and review time by 60%**.
- Integrated Google Search Console and Analytics directly into the headers, increasing visibility in search engines and achieving a **100 SEO Score** on Web Vitals.
- Participated in the entire software development lifecycle (SDLC), applying good coding practices and participating in code reviews.

### Creator and Front-End Developer - [Overloaded Blog](#)

Oct 2025 – Present

- Architected a high-performance blog using Astro.js, optimized for SEO. **Achieved 100 SEO Score and 94 performance on mobile and desktop in Lighthouse**, the project already reaches **58 monthly readers**.
- Componentized blog sections in React, Vue, and Svelte, applying modern UI architecture patterns and deepening my experience with the Front-end ecosystem.
- Integrated Google AdSense, Search Console, GA4, and Vercel Analytics to ensure observability.
- Developed a serverless API in Supabase to track full article reads via client-side events, **integrating personalized behavioral metrics** into the blog's analytics pipeline.

### Open Source Developer - Global

Jan 2024 – Present

- Refactored React components of [HeroUI](#), fixing interface bugs and **elevating mobile and desktop visual consistency** for over 73,000 users.
- Added Javascript and TypeScript examples to the [Grokking Algorithms](#) book repository, making it more accessible to web developers.
- Actively contributed to 8 open-source projects on GitHub, including React and Tailwind CSS documentation, in addition to implementing corrections and UI improvements to ZenUI Labs and SeraUI.

## EDUCATION

---

### Descomplica University

Dec 2028
